

Product no **AS09 484****Na<sup>+</sup>/H<sup>+</sup> antiporter, sodium/hydrogen exchanger****Product information**

<b>Immunogen</b>	KLH-conjugated synthetic peptide derived from <i>Arabidopsis thaliana</i> NHX protein UniProt: <a href="#">Q68K14</a> , TAIR: <a href="#">At5g27150</a> ; chosen peptide is perfectly confirmed in AtNHX1 UniProt: <a href="#">Q0WVZ5</a> , partially in AtNHX2, UniProt: <a href="#">Q56XP4</a> , and not conserved in AtNHX3, UniProt: <a href="#">Q84WG1</a> and AtNHX4, UniProt: <a href="#">Q8S397</a> isoforms
<b>Host</b>	Rabbit
<b>Clonality</b>	Polyclonal
<b>Purity</b>	Immunogen affinity purified serum in PBS pH 7.4.
<b>Format</b>	Lyophilized
<b>Quantity</b>	50 µl
<b>Reconstitution</b>	For reconstitution add 50 µl of sterile water
<b>Storage</b>	Store lyophilized/reconstituted at -20°C; once reconstituted make aliquots to avoid repeated freeze-thaw cycles. Please remember to spin the tubes briefly prior to opening them to avoid any losses that might occur from material adhering to the cap or sides of the tube.
<b>Additional information</b>	Protocol for vacuolar membrane isolation can be found <a href="#">here</a> .

**Application information**

<b>Recommended dilution</b>	1 : 8000 (ELISA), 1 : 1000 (WB)
<b>Expected   apparent MW</b>	59,5   45 kDa
<b>Confirmed reactivity</b>	<i>Arabidopsis thaliana</i> , <i>Kandelia obovata</i> , <i>Oryza sativa</i> , <i>Solanum lycopersicum</i> , <i>Vitis vinifera</i>
<b>Predicted reactivity</b>	<i>Gossypium hirsutum</i> , <i>Populus euphratica</i> , <i>Ricinus communis</i> , <i>Zea mays</i> (NHX1, NHX4) Species of your interest not listed? <a href="#">Contact us</a>
<b>Not reactive in</b>	Mangrove plants, <i>Nicotiana benthamiana</i> , sp. <i>Avicennia</i> ,

**Application example**

**1 µg and 10 µg of crude membrane fraction/lane** from *Arabidopsis thaliana* (left panel) and **1, 5 and 10 µg of crude membrane fraction/lane** *Raphanus sativus* L. (right panel) were separated on 12 % SDS-PAGE and blotted 1h to PVDF membrane (40 min. at 10 V using BioRad semidry transfer). Filters were blocked 1h with 5 % low-fat milk powder in TBS-T (0.05% Triton X.100). Membranes were washed 5 times with TBS-T, each time in a fresh polystyrene box and probed with anti-NHX antibodies (AS09 484, **1:1000**, 1h) and secondary anti-rabbit (**1:2000**, 1 h). Detection was done using chemiluminescence. All steps were performed in RT with agitation.
