**Application example**

**5 µg** of total protein from (1) *Arabidopsis thaliana* total leaf extract; (2) *Zea mays* total leaf extract were separated in a **12% or 5-15%** gradient gel following by transfer to **nitrocellulose membrane**. Membrane was blocked with **TBST + 4% non-fat dried milk, 20 min** following by three washes in TBST. Incubation time with primary and secondary antibodies was 1 hr primary, 30 min for secondary antibodies. Detection was performed using chemiluminescence.
