## IgG1 (Negative Control, clone VI-AP)

## **Product information**

Host Mouse

Clonality Monoclonal

Subclass/isotype | IgG1

Purity IgG1 immunoglobulin affinity purified in PBS pH 7.2. Contains 1% BSA, 0.05% sodium azide.

Format Liquid

Quantity 0.2 mg

**Storage** Stored at 2-8°C, do not freeze.

**Additional information** 

The clone VI-AP reacts with calf intestine alkaline phosphatase and does not show cross-reactivity with human proteins.

The sensitivity of VI-AP mAb is determined by staining well-defined blood samples from representative donors with serial-fold mAb dilutions to obtain a titration curve that allows relating the mAb concentration to the percentage of stained cells and geometric MFI (mean fluorescence intensity). For this purpose, a mAb-concentration range is selected to include both the saturation point and the detection threshold. In practice,  $50~\mu$ l of leukocytes containing  $10^{\circ}$ 7 cells/ml are stained with  $20~\mu$ l mAb of various dilutions to obtain a titration curve and to identify the saturation point and detection threshold. The final concentration of the product is then adjusted to be at least 3-fold above the detection threshold.

## **Application information**

Confirmed reactivity Calf intestine alkaline phosphatase (no cross reaction with human proteins)
