Background Saxitoxin (STX) is a neurotoxin that acts as a selective sodium channel blocker and is naturally produced by certain species of marine dinoflagellates (Alexandrium sp., Gymnodinium sp., Pyrodinium sp.) and cyanobacteria (Anabaena sp., some Aphanizomenon spp., Cylindrospermopsis sp., Lyngbya sp., Planktothrix sp.). Ingestion of STX (usually through shellfish contaminated by toxic algal blooms) is responsible for the human illness known as paralytic shellfish poisoning (PSP). Saxitoxin, one of the most potent natural toxins known, acts on the voltage-gated sodium channels of nerve cells, preventing normal cellular function and leading to paralysis.

Immunogen BSA-conjugated saxitoxin

Host Rabbit

Clonality Polyclonal

Purity Serum

Format Liquid

Quantity 0.1 ml

Storage Store at 4°C up to one month or in aliquots at -20°C for long time storage. Avoid repeated freezing and thawing.

Tested applications ELISA (ELISA)

Related products AS11 1696 | anti-saxitoxin, antibodies in serum format, larger pack size - 1 ml

Secondary antibodies

Additional information Contains 0.01% sodium azide as preservative.

Application information

Recommended dilution The optimal working dilution should be determined by the investigator.

Confirmed reactivity Toxin from marine dinoflagellates, cyanobacteria and mussels

Not reactive in No confirmed exceptions from predicted reactivity are currently known.

Additional information The term saxitoxin can also refer to the entire suite of related neurotoxins produced by these microorganisms, which include pure STX, neosaxitoxin (neoSTX), the gonyautoxins (GTX) and decarbamoylsaxitoxin (dcSTX). Manufactured by Antiprot.
