product AS09 522
Lhcb1 | LHCII type I chlorophyll a/b-binding protein (Arabidopsis specific)

product information

Background | The major light-harvesting antenna complex II (LHCII) in photosynthetic eukaryotes is located in the thylakoid membrane of the chloroplast. It is a heterotrimeric complex formed by up to 3 different individual subtypes of chlorophyll a/b-binding proteins: Lhcb1, Lhcb2, and Lhcb3. Lhcb1 is the most abundant chlorophyll a/b-binding protein in eukaryotic phototrophs and often is coded by several nuclear genes.

Immunogen | BSA-conjugated synthetic peptide derived from Arabidopsis thaliana At1g29910 (Lhcb1.1), At1g29920 (Lhcb1.2), At1g29930 (Lhcb1.3, most expressed), At2g34430 (Lhcb1.4), and At2g34420 (Lhcb1.5)

Host | Rabbit

Clonality | Polyclonal

Purity | Affinity purified serum

Format | Lyophilized in PBS pH 7.4

Quantity | 100 µg

Reconstitution | For reconstitution add 100 µl of sterile water

Storage | Store lyophilized/reconstituted at -20°C; once reconstituted make aliquots to avoid repeated freeze-thaw cycles. Please, remember to spin tubes briefly prior to opening them to avoid any losses that might occur from lyophilized material adhering to the cap or sides of the tubes.

Tested applications | Western blot (WB)

Related products | AS01 002 Lhcb3 | LHCII type III chlorophyll a/b-binding protein

Plant protein extraction buffer
Secondary antibodies

Application information

Recommended dilution | 1 : 2500-1 : 5000 (WB)

Expected | apparent MW
28 | 25 kDa for Arabidopsis thaliana

Confirmed reactivity | Arabidopsis thaliana, Digitaria sanguinalis, Echinochloa crus-galli, Pinus strobus L.

Predicted reactivity | Algae, Dicots, Mosses

Not reactive in | No confirmed exceptions from predicted reactivity are currently known.

Additional information | This Lhcb1 antibody is directed specifically against the Arabidopsis Lhcb1 gene products, for those that would prefer higher specific activity over broader specificity offered by Agrisera older Lhcb1 antibody, AS01 004
