

Product no **AS01 009****Anti-Lhcb5 | CP26 chlorophyll a/b-binding protein of plant PSII****Product information**

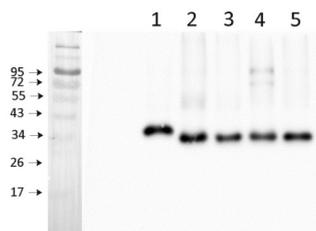

Immunogen	BSA-conjugated synthetic peptide derived from <i>Arabidopsis thaliana</i> Lhcb5 protein UniProt: Q9XF89 , TAIR: AT4G10340 sequence. This sequence is highly conserved in Lhcb5 proteins from monocots, dicots and conifers but only partial conserved in <i>Physcomitrella patens</i> and <i>Chlamydomonas reinhardtii</i> .
Host	Rabbit
Clonality	Polyclonal
Purity	Serum
Format	Lyophilized
Quantity	50 µl
Reconstitution	For reconstitution add 50 µl of sterile water
Storage	Store lyophilized/reconstituted at -20°C; once reconstituted make aliquots to avoid repeated freeze-thaw cycles. Please remember to spin the tubes briefly prior to opening them to avoid any losses that might occur from material adhering to the cap or sides of the tube.
Additional information	This product can be sold containing ProClin if requested

Application information

Recommended dilution	1 : 1000 (WB)
Expected apparent MW	30 25-26 kDa for <i>Arabidopsis thaliana</i>
Confirmed reactivity	<i>Arabidopsis thaliana</i> , <i>Camelina sinensis</i> , <i>Echinochloa crus-galli</i> , <i>Hordeum vulgare</i> , <i>Drosera capensis</i> , <i>Oryza sativa</i> , <i>Pisum sativum</i> , <i>Spinacia oleracea</i> , <i>Triticum aestivum</i> , <i>triticale</i> , <i>Zea mays</i>
Predicted reactivity	Dicots, Gymnosperms
Not reactive in	No confirmed exceptions from predicted reactivity are currently known
Additional information	Protein is processed into mature form (Jansson 1999).

Photosynthesis and organization of maize mesophyll and bundle sheath thylakoids of plants grown in various light intensities. <i>Environmental and Experimental Botany Volume 162</i>, June 2019, Pages 72-86.</p>

5 µg protein of (1) chloroplasts, (2) thylakoids, and (3) Photosystem I of *Arabidopsis thaliana* together with (4) BBY (Photosystem II) -particles from *Pisum sativum* were separated on **4-12%** NuPage (Invitrogen) **LDS-PAGE** and blotted 1h to **nitrocellulose**. Filters were blocked 1h with 2% low-fat **milk powder** in TBS-T (0.1% TWEEN 20) and probed with anti-Lhcb5 (AS01 009, **1:1000**, 1h) and secondary anti-rabbit (**1:20 000**, 1 h) antibody (HRP conjugated) in TBS-T containing 2% low fat milk powder. Antibody incubations were followed by washings in TBS-T (15, +5, +5, +5 min). All steps were performed at RT with agitation. Signal was detected with **chemiluminescence detection reagent**, using a Fuji LAS-3000 CCD (90s, standard sensitivity).

1 µg of chlorophyll from chloroplasts of: *Pisum sativum* (1), *Echinochloa crus-galli*, M chloroplasts (2), *Echinochloa crus-galli*, BS (bundle sheath) chloroplasts (3), *Zea mays* M chloroplasts (4), *Zea mays* BS (bundle sheath) chloroplasts (5), extracted with 0.4 M sorbitol, 50 mM Hepes NaOH, pH 7.8, 10 mM NaCl, 5 mM MgCl₂ and 2 mM EDTA. Samples were denatured with Laemmli buffer at 75°C for 5 min and were separated on 12% SDS-PAGE and blotted 30 min to PVDF using wet transfer. Blot was blocked with 5% milk for 2h at room temperature (RT) with agitation. Blot was incubated in the primary antibody at a dilution of 1: 1000 overnight at 4°C with agitation in 1% milk in TBS-T. The antibody solution was decanted and the blot was washed 4 times for 5 min in TBS-T at RT with agitation. Blot was incubated in secondary antibody (anti-rabbit IgG horse radish peroxidase conjugated, from Agrisera, [AS09_602](#), Lot 2001) diluted to 1:20 000 in 1 % milk in TBS-T for 1h at RT with agitation. The blot was washed 5 times for 5 min in TBS-T and 2 times for 5 min in TBS, and developed for 1 min with 1.25 mM luminol, 0.198 mM coumaric acid and 0.009% H₂O₂ in 0.1 M Tris- HCl, pH 8.5. Exposure time in ChemiDoc System was 73 seconds.
