10 µg of a crude extract of *Saccharomyces cerevisiae* strain BY4741 was separated on a 10-20 % gradient gel by SDS-PAGE and blotted to a PVDF membrane using wet transfer. Primary antibody was incubated at 1 : 2000 for 1h/RT in TBS-T, followed by washes and incubation with a secondary goat anti-rabbit IgG HRP conjugated antibodies, used at 1 : 10 000 1h/RT. The reaction was developed using chemiluminescence following manufacture's recommendations.
