### Product no AS22 4820

## Anti-SQE1-3 | Squalene epoxidase1-3

### **Product information**

Immunogen KLH-conjugated peptide derived from Arabidopsis thaliana SQE protein sequences, UniProt: Q9SM02,081000,

Q8VYH2, , TAIR: At1g58440, At2g22830, At4g37760

**Host** Rabbit

Clonality Polyclonal

**Purity** Affinity purified serum, in PBS pH 7.4

Format Lyophilized

Quantity 50 μg

**Reconstitution** For reconstitution, add 50 μl of sterile or deionized water.

Storage Store lyophilized/reconstituted at -20°C; once reconstituted make aliquots to avoid repeated freeze-thaw cycles. Please, remember to spin tubes briefly prior to opening them to avoid any losses that might occur from lyophilized

material adhering to the cap or sides of the tubes.

# **Application information**

Recommended dilution 1:1000 (WB)

Expected | apparent

64.7 | 59.5 kDa (due to N-terminal or C-terminal processing)

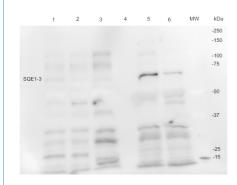

Confirmed reactivity | Arabidopsis thaliana

Predicted reactivity Brassica napus, Zea maize, Oryza sativa, Brachypodium distachyon, Triticum sp., Hordeum vulgare

Species of your interest not listed? Contact us

Not reactive in No confirmed exceptions from predicted reactivity are currently known

**Selected references** To be added when available, antibody available in March 2025.

#### Samples:

- 1 20 ug of Withania somnifera whole leaf extract (leaves) adult plant, in soil, full watering
- 2 20 ug of Withania somnifera whole leaf extract (leaves) adult plant, in soil, drought treatment
- 3 20 ug of Withania somnifera whole leaf extract (leaves) adult plant, in soil, yeast extract treatment
- 4 No samples
- 5 20 ug of *Arabidopsis thaliana* whole leaf extract (leaves) rosette development stage, in soil
- 6 20 ug of *Arabidopsis thaliana* SAIL\_1252\_E02 (insertion in G6PD1 At5g35790) rosette development stage, in soil Mark: MW markers

20 μg/well of total protein freshly extracted from *Withania somnifera* and *Arabidopsis thaliana* have been used. Exact buffer components were: TrisHCl 100 mM, MgCl<sub>2</sub> 10 mM, NaEDTA 4 mM, 10% of glycerol and 1% of protease inhibitor solution; and denatured with exact buffer components at 95°C/5 min. Samples were separated on 10 % SDS-PAGE and blotted for 7 minutes to PVDF (pore size of 0.2 μm), using a Trans-BlotTurbo Transfer System. The blot was blocked with 5% milk for/RT with agitation. The blot was incubated in the primary antibody at a dilution of 1: 500 in TBS-T ON/4°C with agitation. The antibody solution was decanted, and the blot was rinsed briefly twice, then washed once for 15 min and 3 times for 5 min in TBS at RT with agitation. Blot was incubated in a matching secondary antibody (anti-rabbit lgG horse radish peroxidase conjugated) diluted to 1: 25 000 in TBS for 1 h/RT with agitation. The blot was washed as above and developed with the following

chemiluminescent detection reagent: Agrisera ECL Bright. Exposure time was 45 seconds. For lower background signal, primary antibody should be incubated 1h/RT at the dilution of 1: 1000.
