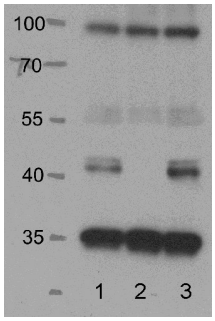
application example



20 µg of total protein from two-week-old seedling of *Arabidopsis thaliana* Col-0 **(1)**, snrk2.2/3/6 **(2)**, snrk1/4/5/7/8/9/10 **(3)** extracted with kinase buffer were separated on 10 % SDS-PAGE and blotted 30 min to PVDF using semi-dry. Blots were blocked with 5% skim milk in TBST for 1h at room temperature (RT) with agitation. Blot was incubated in the primary antibody at a dilution of 1: 5000 in 0.5% TBST for overnight at 4 oC with agitation. The antibody solution was decanted and the blot was washed 3 times for 10 min in TBS-T at RT with agitation. Blot was incubated in secondary antibody (anti-rabbit IgG goat peroxidase conjugated) diluted to 1: 5 000 in 0.5 % TBST for 1h at RT with agitation. The blot was washed as above and developed for 5 min with ECL according to the manufacturer's instructions. Exposure time was 30 seconds.
